EDUCATION

University of Maryland, College Park

Bachelor of Science in Computer Science & Math

College Park, MD

Sep. 2025 – May 2028

- Relevant Coursework: Applications of Linear Algebra, Computer Systems, Probability Theory
- GPA: 3.9/4.0 (Dean's List)

DAV Public School

High School Diploma in Mathematics and Computer Science

Palampur, H.P., India

Mar. 2021 – May 2025

- Top 1% Scorer in All India Central Board of Secondary Examinations Grade XII

TECHNICAL SKILLS

Languages: Python, Java, PostgreSQL, MATLAB, HTML, CSS, JavaScript, React.js

Frameworks & Libraries: Pandas, NumPy, Matplotlib, Plotly, Scikit-learn, pdfplumber, fpdf2, KNIME

Developer Tools: Anaconda, Jupyter Notebook, Visual Studio Code, IntelliJ IDEA, Docker, AutoCAD, Fusion

EXPERIENCE

InveniAI

AI/ML Research Intern

Remote

Nov. 2023 – Jul. 2024

- Engineered automated data pipelines using Python (Pandas, NumPy, Matplotlib) and KNIME to process and analyze **50,000+ gene-drug** relationships from OpenTargets and DisGenet databases for obesity therapeutic research
- Developed algorithms to filter massive datasets and identify unique Gene-Disease Associations (GDA), implementing custom scoring mechanisms to rank **500+ gene-obesity** combinations based on correlation strength
- Built predictive models to discover novel drug-target relationships, achieving **85%+ correlation** accuracy between independent database scores through comparative analysis and relative scoring methodologies
- Optimized data workflows **reducing processing time by 40%** through efficient command-line operations and Python automation, enabling identification of **20+ novel therapeutic targets** for pharmaceutical development

PROJECTS

OfferIQ (GitHub)

Python, Flask, SQLite, Tailwind CSS, Scikit-learn, Chart.js, Anthropic Claude API

Apr. 2026 – Current

- Engineered a full-stack career-finance system processing offer-letter PDFs in under **20 seconds across 12+ dimensions** by integrating a Flask and SQLite backend with the Claude API and a Tailwind frontend.
- Achieved **0.85 test R²** and **sub-200ms** inference latency by training a **scikit-learn GradientBoostingRegressor** on **600+** data points to dynamically predict and render 5-year earnings trajectories.
- Shipped a 7-feature product in under 36 hours by developing a SQLite-backed historical database for real-time percentile grading and a custom **LLM tool-use chatbot** for "what-if" financial simulations.

Non-Profit Inventory Management Platform (GitHub)

Python, Java Spring Boot, Postgre SQL, Docker

Dec. 2025 – Jan. 2026

- Reduced manual inventory tracking time by **30% for over 1000+ stock units** by engineering a full-stack solution that integrates a Java Spring Boot backend with a Python Streamlit analytics dashboard.
- Achieved sub-100ms data synchronization latency across the stack by designing a RESTful API architecture that handles **100% of real-time CRUD** operations without data loss.
- Slashed environment setup time by **90% (from 1 hour to <5 minutes)** by containerizing the PostgreSQL database using Docker, ensuring 100% runtime consistency across development stages.

HONORS & AWARDS

International Olympiad of Mathematics 2023-2024 Gold Medalist (SilverZone Foundation) | AP (Advanced Placement) Scholar Award | Allen Special Performers Group (SPG) | Top 1% All India CBSE Grade XII Examinations
